## Mini Infra-Red Thermometer

Extech's new compact InfraRed (IR) Thermometer, Model 42500, quickly measures surface temperature from –4 to 500°F (-20 to 260° C). A built-in laser pointer makes sure that the thermometer is aimed at the target. Otherwise the readings could be the temperatures of surrounding areas and, therefore, incorrect. Since no contact is involved, the user can take measurements of objects that are hard to reach or that may be unsafe to touch. The large LCD is backlit so that readings are visible even in low light levels. With its mini size and light weight (4.9oz), the thermometer is easily carried around and always handy for a quick temperature check.

Dimensions: 6.7x1.7x1.6" (170x44x40mm).
