EXTECH INSTRUMENTS OFFERS PROGRAMMABLE SOUND LEVEL MONITOR WITH ALARM

Ideal for Maintaining Proper Noise Levels in Health Care Environments

Extech Instruments, one of the world's largest suppliers of test equipment and portable printers, offers its SL120 sound level monitor and alarm. Designed to examine decibel levels and alert users when they exceed pre-set limits, the ANSI Type 2 SL120 is the ideal solution for maintaining desired noise levels in health facility settings.

As a stand-alone device or wall mounted in patient rooms, intensive care areas, nurseries and hallways Extech's SL120 can be strategically placed to monitor noise levels for entire areas. The SL120's microphone is also detachable and can be remotely located using the optional microphone cable. The SL120's large LCD display allows it to be easily read from distances of greater than 30 feet and its unique alarm system indicates when quiet is needed through the use of relay modules which will illuminate large warning signs and remote noise indicators. With a programmable high limit set point between 30 and 130db's, the SL120 is extremely flexible and settings can be quickly changed to meet varying needs. Certificates of Traceability to NIST are available.

Highly effective in maintaining proper noise levels, the SL120 can also assist in eliminating noise factors by recording the time and date of maximum decibel level occurrences. The SL120 also features rear panel controls to prevent unauthorized programming, a clock display, and programmable start-stop time for extended battery life.

About Extech Instruments

Headquartered in Waltham, Massachusetts, Extech Instruments is one of the largest suppliers of test equipment and portable printers worldwide. Founded in 1971 and with its processes ISO 9001 2000 certified, Extech is known for its innovation in providing instruments with unique combinations of features that make them highly useful and very convenient.

(MORE)

The company is comprised of two divisions: the Instruments Division, which designs and supplies handheld test and measurement instruments, and the Data Systems Division, a manufacturer of portable receipt printers. The Instruments Division offers over 14 major product lines used in a wide variety of markets and distributes these products worldwide through leading distributors and OEMs
